Version: 1.0.0

- [Introduction](#)
- [Installation](#)
- [Usage](#)

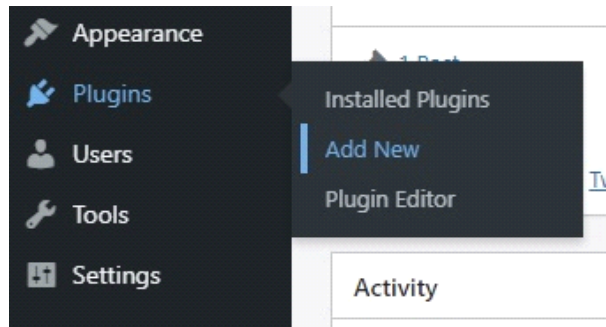

Introduction

Please note that this plugin is an addon for [WPFancyTables - Pricing Table Builder For WordPress](#). This requires both WPFancyTables, and Elementor to be installed in order to work!

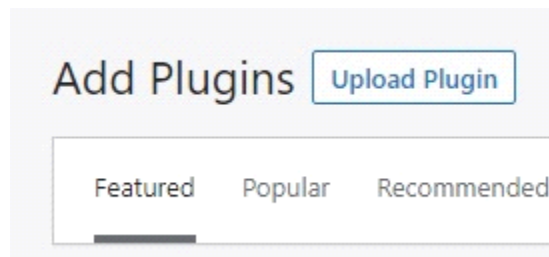

This addon allows you to add pricing tables - created with WPFancyTables - to your Elementor pages, and add more styles to them through Elementor editor.

Installation

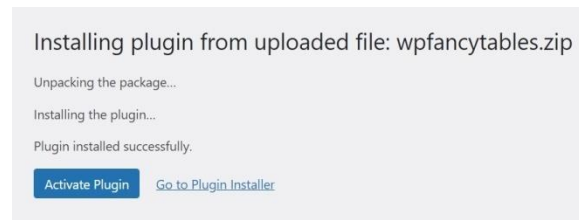

1. Navigate to the 'Plugins' item on the left sidebar, and select the 'Add New' option.

2. Click on the "Upload Plugin" button at the top of the page, next to the "Add Plugins" title. Look for the "wpfancytables-elementor.zip" from your computer, and then click on the "Install Now" button.

3. After the .zip file has uploaded successfully you will be redirected to a new page. You can see something like this:

4. Finally click on the "Activate Plugin" button.

Usage

If you have already created some projects with WPFancyTables, just go to the Elementor editor, and look for the new WPFancyTables widget in the "General" category. Drop the widget to the page, then the modal window will open automatically. Here you can search for your projects. Hover your cursor over an item, and click the "Import" icon at the top left. That's all.

Additionally, you can change styles of your table. Go to "Style" tab in the settings sidebar. Here you can change colors, responsive dimensions, set borders, and shadows for columns, buttons, cycles, popups, and ribbons, or set custom typography for texts.
